

Risk Management Onsite Program

“Property Conservation- Protecting Your Municipal Assets”

Property Conservation is a goal of all municipalities. MIIA has developed a program that will assist you in protecting your municipal property assets and help you to reduce your workers' compensation and liability claims. MIIA Rewards credits will be available to those who agree to implement the program and will be applied to your FY09 insurance premiums. Depending on your level of participation, you could earn up to 8% Rewards credit.

The Property Conservation Program is a four part program that includes roof inspections, freeze-up prevention, indoor air quality review and facility self inspections. This program requires an ongoing commitment from your community throughout the year in order to participate.

Your Loss Control Representative is available to provide an onsite review of the program to your safety committee or maintenance staff to help further explain each component. Once training has been provided on the program, they will assist you with the implementation process. If you already have these programs in place and do not require training, please contact your Loss Control Representative to learn how to receive Rewards credit. If you do not have a program in place, please contact your Loss Control Representative to schedule a review.
