MIIA Risk Management Training

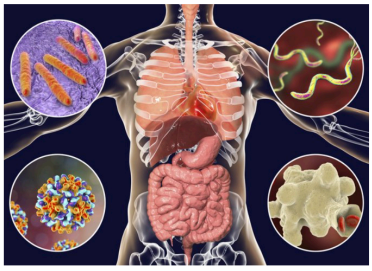

Workplace Safety

Bloodborne Pathogens (BBP) For Schools

Bloodborne pathogens (BBP) are infectious microorganisms present in blood or potentially other bodily fluids that can cause disease/s in humans. These pathogens can expose workers to serious or life-threatening illnesses. This session provides an overview of OSHA requirements, and will provide guidance on how to recognize, evaluate, and control the potential exposures to bloodborne pathogens.

TOPICS of DISCUSSION

- Bloodborne Pathogens – symptoms of and illness from HIV, Hepatitis B (HBV), and Hepatitis C (HCV).
- Routes of Transmission and Exposure Risks - in school buildings
- Prevention and Work Controls:
  - Blood Spills - Safe practices to clean-up spills of blood and other potentially infectious body fluids, including use of a BBP spill kit and management of spill waste and sharps
  - Used Syringes - Safe practices to pick-up used syringes and management of sharps containers (for employees that are tasked with this task)
- Exposure Control Methods - engineering controls, work practices, PPE (selection, use, limitations, removal, handling, decontamination, disposal), and housekeeping
- Hepatitis B Vaccination – employer requirements, employee declination, benefits, efficacy, method of administration, vaccine schedule, etc.
- Exposure Response - Procedures for exposure response, reporting, and medical evaluation/follow-up
- Training Requirements
- Exposure Control Plan – elements and availability
